# Mezzanine Floor

## What is Mezzanine Floor ?

A mezzanine floor is essentially a raised platform that is supported by steel columns and it's totally independent of the host building. It allows you to create additional floor space from wasted air space above existing work and storage areas and can be used to create extra office storage, production or retail space . Any other extra level of storage can be added to the existing framework of the floor.

Mezzanine Floor

Triple Decker Mezzanine Floor

This is specifically designed to meet standard comprises columns, main beams and clip-on secondary beam such is its proven strength.

Perforated Mezzanine Floor

Mezzanine Floor

It is the quick, easy, cost effective way of installing a mezzanine floor and gaining the advantage of additional room for extra storage, office accommodation or any other purpose .

# Double Decker Mezzanine Floor

Double Decker Mezzanine

Double Decker Mezzanine

Certainly the hallmark of every Industrial Structures platform (mezzanine) is its clean, unique, integrated finish that brightens the work space, resists corrosion and scratches and reflects light far better than painted surfaces.

Double Decker Mezzanine

Double Decker Mezzanine

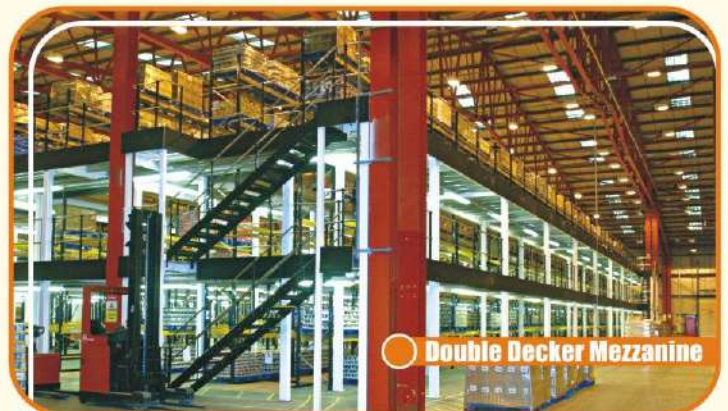

Mezzanine Floor

Mezzanine floors is the need of every industry today for products/goods storage and maximize the space capacity. These semi permanent structures are free located and can be dismantled and relocated . Plannco manufactures and installs such mezzanine floors with quality precision and safety.

# Pallet Racking System

## Cantilever Racks

It is normally used for storage of lengthy profiles. These racks are great to organize a warehouse, lumber yard or manufacturing facility. So often to put bulk items like pipes, tubes, aluminum sheets, flake board, steel sheets etc. in pipe on the floor- leaving it too the warehouse personnel to the constantly sort unrelated heavy and bulky items. With cantilever racks, each type of product can be segregated by commodity and size.

Plastic Pallet

MS Pallet

Wooden Pallet

Two/three tier storage system is mainly used for storage and order picking of non-palletised goods, bins, cartons or other storage unit containing small components and for bulk storage. Two/three tier system helps to increase storage efficiency by making full use of floor surface.

A good utilization of the warehouse heights leads to reduced order processing times as additional tier allow to set up further storage and order picking installation. Stair and/or lifts connect the walkway/ aisles on different tiers.

# Two/Three Tier Racking System

We Offer Two/ Three tier storage racks. These are robustly built, heavy duty racks used in various industries to store large quantities of good. These storage racks can be customized according to the clients needs. Quality is the top most priority while manufacturing these two/three tier storage racks.

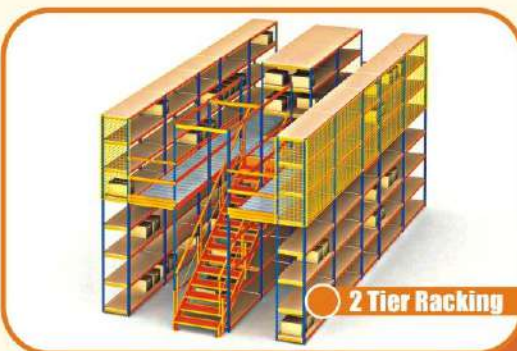

These are available in variety of patterns and sizes to meet the demands of the client.

- a) Optimum utilization of the available space.
- b) Available with staircase and catwalk flooring.
- c) Capacity to hold large number of goods.
- d) Available in various sizes and features.

A raised storage area, or tiered storage structure as it is most commonly known, is a raised platform rack or shelf mounted structure independent of the host building structure.

It is supported by either pallet racking or shelving to eliminate the need for a structural floor. It increases floor space and optimizes storage capacity by using the height of the building.
